Our story

Even if you have never worked with Keyang power tools before, chances are you have been using our technology for years. Our roots lie in the development and production of electric motors and electronic components for numerous renowned automobile manufacturers worldwide. For example, we currently produce 30 million DC/BLDC motors per year for over 30 well-known car manufacturers. Overlapping technologies and opportunities in the domestic market made the start of our own power tool division an ambitious, yet logical step. Therefore, 45 years ago, in 1977, we started the production of Keyang Powertools in Ansan, South Korea.

What started as a passion project has now grown into a substantial part of the organisation. With our position as market leader on the Korean market as a starting point, we work hard every day to also bring Keyang to Europe and America. To this end, we form partnerships with local players so that trusted quality always goes hand in hand with excellent service. So, whether you are just learning about Keyang or have been a loyal fan for years, we appreciate your trust and are ready to provide you with prompt and honest service and a steadily growing range of quality machines.
